

Labelmart

FOUR COLOR PROCESS

All four-color process printing systems are not created equal.

The majority of flexographic printing presses in operation are capable of printing at a resolution of 120-133 lines per inch. The leading edge technology available at Labelmart, has the ability to maintain higher tolerances, print at a resolution of 150-200 lines per inch., and to produce consistent print quality over long periods of time.

When UV ink is applied, the high resolution of newer printing systems eliminates dot gain and allows for precision dot placement to achieve near photo quality pieces. The brilliance and stability of the UV inks also produce crisp, sharp edges for higher quality finished products.

- 4-Color Process
- Spot Color
- Cold Foil
- Hot Foil
- Embossing
- Tactile
- UV Undercoat
- WB Varnish
- Laminate
- Digital/Sequential
- Adhesive Side Print
