

Print & Apply Pail Labeling System

Quadrel's pail labeling system features a rubber belt conveyor, stainless steel construction and rotary actuating vacuum pads to apply the labels to the leading edge, sides and trailing edge of 1 or 5 gallon buckets or pails. The system is hand loaded and achieves a production rate of 15-20 products per minute.

This labeling system features our heavy-duty printer applicator and a secondary pneumatic cylinder impresser.

Pails are manually loaded with the handles riding on the guide rails. Products are aligned by a guide rail and driven by a lug on the conveyor. The system prints and applies a label to the side of the pail. The secondary pneumatic cylinder impresses the remainder of the label around the side of the pail.

Features and Specs

- SKU: P&A_Single_Side
- Speed: Up to 25 ppm
- Accuracy: 1/32"
- Max Product Height: 8"
- System Length: 10"
